

ABDIL NAYAKA RIZKY

Bogor, Indonesia | +62 812 1010 2875 | [Email](#) | [Github](#) | [LinkedIn](#) | [Website](#)

Highly motivated Informatics student specializing in Fullstack Development, Artificial Intelligence, and scalable backend systems. Adept at building microservices architectures and integrating Generative AI into robust web applications. Passionate about continuous learning, algorithmic problem-solving, and currently seeking Software Engineering internship opportunities to drive impactful technical solutions.

EDUCATION

GUNADARMA UNIVERSITY

Bachelor of Informatics

Cumulative GPA: 3.89 (6th Semester)

Depok, Indonesia
Expected 2023 - 2027

PROJECTS

Digital Payment Gateway API

May 2026

Tech Stack: Java 17, Spring Boot, PostgreSQL, Spring Data JPA

- Engineered a secure, 3-tier RESTful API to simulate dynamic payment lifecycles and manage relational data persistence using PostgreSQL and Hibernate/JPA.
- Enforced strict data integrity controls by implementing Jakarta Validation (DTOs) to securely filter inbound transaction payloads.
- Built a centralized Global Exception Handler (@RestControllerAdvice) to intercept runtime failures and generate standardized, client-ready JSON error responses.
- Designed the architecture with complete decoupling of concerns (Controller, Service, Repository) to ensure enterprise-grade maintainability.

hirint (AI-Powered Applicant Tracking System)

May 2026

Tech Stack: Golang, Gin, GORM, Next.js, Tailwind CSS, Python, PostgreSQL, Google Gemini API

- Engineered an AI-powered applicant tracking system integrating Google Gemini Generative AI to automate resume parsing, analyze skill sets, and dynamically calculate candidate-job match scores.
- Integrated Google Gemini Generative AI to automate complex resume parsing, perform intelligent skill-set extraction, and generate dynamic match scores based on job descriptions.
- Architected a scalable Monorepo comprising a high-performance Golang core API and a Python NLP microservice, optimizing relational data persistence in PostgreSQL using advanced GORM preloading.
- Developed secure, role-based Next.js dashboards featuring a modern UI, real-time application tracking, smart local-storage notifications, and secure multipart/form-data CV uploads.

Skills

Programming Languages: HTML, CSS, Java, Golang, Python, JavaScript/TypeScript, SQL

Frameworks & Libraries: Spring Boot, Next.js, React, Gin, Tailwind CSS

Databases & Tools: PostgreSQL, Git, Docker, REST APIs, GORM, Hibernate/JPA

Languages (Spoken): Indonesian (Native), English (Professional Working Proficiency)
